Inspection Check List for: Scaffold

| Risk assessment | |
|--|----------------------|
| Frequency of the In-service inspection done by the user/owner | Weekly |
| operation manual & Maintenance Record available upon request write either(• both available, • operation manual only) | N/A |
| Labels and decals for operation on the lift write either(• available • owner provided) | Available |
| Previous 3rd party certificate if any write either(•New equipment (first inspection) • present and valid • present and invalid • Not available) | N/A |
| Operator training proof write either (• training certificate available• brief training provided by inspector• Experiences proof) | N/A |
| Operator training proof write either (• training certificate available• brief training provided by inspector• Experiences proof) | N/A |
| Appropriate PPE for the operator write either(• helmet • shoes , • harness, • safety reflection jacket) | Helmet shoes jacket |
| Is the environmental contain any hazardous conditions such as, extreme humidity, dust, sand, salt air, etc. write either (• air conditioning• periodic break• water present• supervision • safety goggles) | N/A |
| Is the location is next foot walks or traffic workstation or public areas write either (• present, • site condition not required) | N/A |
| Isolate all area, and put sign board for inspection progress write either (• present • site condition not required) | Present |
| Manufacture documents matching the lift installed write either (• yes matching • verification with the manufacture after inspection) | Yes matching |
| Ensure the foundation/test area floor is adequate and leveled write either (• leveled , leveled with ease of facility/equipment) | Level |
| Housekeeping, where applicable write either (• clear • clear after rectification) | Clear |
| Wind speed within the limits (12.5 m/s) write either (• within the limit, • waiting to be reduced) | Within limit |
| Hazards from electrical lines write either (• obstruction provided • safe distance) | Obstruction provided |
| Approval from structure engineer/authority for the foundation write either(• approval available • inspector verification on the foundation (torque test for bolts & visual inspection)) | Approval available |
| Adequate lighting | Available |
| Preform tools box meeting | Done |
| Falling form height hazard write either (• safety harness worn • barrication provided) | Harness required |
| Is there any Mechanical hazards, Generated by machine parts or work pieces such : shape, inadequacy | - |
| of mechanical strength, Crushing, impact, contact of person with machine. | N/A |
| Scaffold-Working Platform | |
| Signs for cracks, deformation, cracks | Safe |
| Check base condition underneath the platform | Safe |
| Clear of rubbish, debris and obstructions | Safe |
| Level is within 50 from the chassis | Safe |
| Fall hazards protection, guide rails 1.1 m, toe board 0.15 m, inter-mid rail 0.55 m | Safe |
| Platform made from non-flammable material | Safe |
| Opening of the working platform shall be always inwards, sutiable with a locking device | Safe |
| minimum access opening is 420W,800H mm | Safe |
| minimum access opening is 420W,800H mm | Safe |
| Slip resistance floor | Safe |
| Scaffold-Documentation. | |
| Previous inspection Report. | Safe |
| Design / Drawings. | Safe |
| Design Calculation. | Safe |
| Scaffold-Foundation. | |
| Scaffolding been setup according to the manufacture instruction. | Safe |
| Ground Condition, Soft, Sandy, Hard, Leveled, Concrete. | Safe |
| Back Propping if Required. | Safe |
| Sole board Size (1000 cm2, min width: 225 mm, min thickness: 38 mm) | Safe |
| Sole Board, Split Crack, Deformation, Cavity underneath,etc. | Safe |
| Foundation is level and properly compacted. | Safe |
| Slope tolerance 1:5 or 11 degree. | Safe |
| Scaffold Structure is away from excavation, Water, Overhead Electrical power lines and other | |
| Restriction. Check standard plumpness or any sign of buckling. | Safe Safe |
| | DAIC |
| Warting Croon not and fan are attached with saeffold | |
| Vertical Green net and fan are attached with scaffold. Scaffold Tag. | Safe Safe |

Scaffold-Couplers base plate spigot pin

| Tightening torque of screw coupler 50 N.m and wedge coupler is 500 g hammer | Safe |
|--|--------------|
| Gap b/w closing flap and body 2 mm | Safe |
| Minimum bolt size of coupler 12 mm. | Safe |
| Washer and nut flange thickness not less than 2.5 mm. | Safe |
| | Safe |
| Base Plate Size (150 cm ² , min width: 120 mm thickness 6 mm). | Safe |
| Base Jack , Centrally positioned , Overlap. | Safe |
| Overlap length b/w standard joints 150 mm, if 100 mm Locking device provided. | Safe |
| Scaffold- Electrical Power. | |
| The safe distance is maintained from the electrical power lines Min distance 3m. | Safe |
| Scaffold height more than 20 m is protected from Electrical Power Line and Earthling is provided. | Safe |
| Electrical Distribution boards close to structure are insulated from the structure. | Safe |
| Scaffold-Access. | |
| Safe access is provided for all scaffold platform, Ladder, Stairs and Construction hoist. | Safe |
| Stairway dimensions: (step 125 ? step | Safe |
| Incline Ladder: Step spacing 230 mm? t? 300 mm; Step depth d > 80 mm; Rung spacing 230 mm? t? 300 mm; Rung depth 20 mm? d? 80 mm; Minimum clear width 280 mm; | Safe |
| Maximum vertical distance between different platforms 4,2 m. Maximum distance between the ground and the first platform 4,6 m. | Safe |
| Ladder positioned on 75 degree or slop (4:1). | Safe |
| Access opening (450 mm wide, 600 mm length). | Safe |
| Trap Door. | Safe |
| Ladders adequately secured at top and bottom, (Lashings or Clamps). | Safe |
| Ladder Extension above Platform (1.05 m). | Safe |
| Check the handrail, toe board provided along the access. | Safe |
| Scaffold-Standard, Ledger, Transom. | Sale |
| | |
| Standard is vertically positioned with correct spacing (according to design)check for plumpness and buckling. | Safe |
| Overlap length in joints between standards shall be at least 150 mm. It may be reduced to a minimum of 100 mm if a locking device is provided. | Safe |
| The play between the nominal inner diameter of the tube and the nominal outer diameter of the spigot is not greater than 4 mm. (Max tube size 60 mm) | Safe |
| Prefabricated tubes nominal outside diameter of 48,3 mm wall thickness ? 2,0 mm. | Safe |
| Physical condition of Components. | Safe |
| Ledger are horizontally leveled with correct spacing (According to design). | Safe |
| Transoms are horizontally leveled with correct spacing (According to design). | Safe |
| Standard Vertical to within ± 20 mm in 2 m, (Subject to maximum deviation of 50 mm). | Safe |
| Bay Length and width \pm 200 mm on designated lengths Level to within \pm 20 mm in 2 m, (Subject to a maximum total deviation of 50 mm). | Safe |
| Elongation of tube 24%. | Safe |
| Straightness of any tube length (L) shall not exceed 0,002 L. | Safe |
| Deviations from straightness over any one meter length shall not exceed 3 mm. | Safe |
| Tube outside diameter is 48,3 mm and the specified wall thickness is 3,2 mm for type 3 and 4,0 mm for type 4. | Safe |
| Tolerance on specified outside diameter is +/-0,5 mm. | Safe |
| Tolerance on wall thickness is -10 %. | Safe |
| Nominal mass per unit length of type 3 tube is 3,56 kg/m and for type 4 tube 4,37 kg/m. mass deviation on a single tube shall not exceed -7,5 % of the specified mass | Safe |
| Scaffold-Platform. | |
| Platforms free from obstruction, slip resistance. | Safe |
| Platform Secured against dangerous displacement e.g. unintended dislodging or uplifting by wind | Safe |
| forces. Connection by Clamps or Lashes. | |
| Min Distance b/w platforms 1.90 m. Playwood for platform units shall have at least five plies and a minimum thickness of 0 mm. | Safe Safe |
| Plywood for platform units shall have at least five plies and a minimum thickness of 9 mm. Platform Front Edge Distance (35 cm). (if distance more guardrail provided). | Safe Safe |
| Are planks in good condition. | Safe |
| Are planks in good condition. Are planks adequately secured where they overlap. | Safe |
| platform bays being used to stack/store materials e.g Bricks, Does the weight of these material exceed | Batt |
| the rated W.L.L per platform bay. | Safe |
| Are the planks are free from split, slope of grain, spike knot, paint, wrapped, twisted, worn, damage | Safe |
| iron hoop. | |
| | Safe |
| iron hoop. | Safe Safe |

| Platform planks overlap (15 cm to 30 cm). | Safe |
|---|---|
| Platform End Plank over Hang (15 cm to 30 cm). | Safe |
| Clear Distance b/w platform to tie member (1.75 m). | Safe |
| Platform is level as practicable. | Safe |
| Elastic Deflection 1/100 or 25 mm from adjacent platform. | Safe |
| Lift Height ± 150 mm on the designated height. | Safe |
| Node | Safe |
| Scaffold-Side Protection. | |
| Toe board at least 150 mm above the adjacent level of working area. | Safe |
| Toe Board Height 150 mm (Gap in toe board not exceed 25 mm). | Safe |
| Fencing Structure 100 cm2 (Horizontal dimension of each hole or horizontal slot shall not exceed 50 mm.). | Safe |
| Horizontal distance b/w toe board outer face and the inner face of the guardrail 80 mm max. | Safe |
| Intermediate side protection at least 470 mm above the adjacent level of working area. Capable to | Safe |
| resisting downward load 1.25 kn (127 kg). Principle guardrail height 950 mm -1150 mm (resisting downward load 1.25 kn (127 kg)). | Safe |
| Green net, brick guard, sheeting, is provided if needed. | Safe |
| Scaffold-Bracing. | pare . |
| Has face bracing been provided i.e. longitudinal (According to the manufaction manual) specified | G . 0 |
| angle 450 (Façade or Sway). | Safe |
| Has been provided at the end of the scaffolding ie transverse bracing (Cross bracing, Ledger bracing). | Safe |
| Does the bracing extend the full height of the scaffolding. | Safe |
| Are all bracing pipes are fixed with load bearing coupler. | Safe |
| Scaffold-Ties. | |
| Have ties been installed as per manufacturers/suppliers instructions/information. | Safe |
| Is bottom tie placed no higher than four (4) times the minimum base width or according to design requirements. | Safe |
| Are all ties fixed with load bearing couplers. | Safe |
| Are there sufficient number of ties. | Safe |
| Tie distance should be no more than 300 mm from standard. | Safe |
| Is the scaffold is secure with building at intervals not to exceed (9 m) horizontally and (8 m) vertically | Safe |
| or as recommended by the manufacturer. | built |
| | ~ ~ |
| Outrigger (Raker) is attached where needed tube length not more than (6 m) at (75 degree). | Safe |
| Scaffold-Erection Tolerances. | |
| | Safe |
| Standards: Vertical to within \pm 20 mm in 2 m. (subject to maximum deviation of 50 mm). Bay length and width: \pm 200 mm on designated lengths Level to within \pm 20 mm in 2 m, (subject to a maximum total deviation of 50 mm). | Safe Safe |
